

Manufacturing, Assembly, Packaging and Shipping

Manufacturing

Manufacturing a Wide Variety of Part Sizes.

Our 19,000 square feet of manufacturing space houses 18 thermoplastic injection molding machines ranging from 33 to 800 tons, mold storage and maintenance tooling, and machine shop. Our molding area is equipped with dryers, chillers, granulators, core pull units, mold temperature control units, automatic hopper loading, and assorted coloring equipment.

Assembly

We'll Incorporate Assembly into Our Manufacturing.

Sub-assembly, either inline or post molding, can often be incorporated into our manufacturing process. Our engineers analyze the process and see where some sub-assembly may save time and money.

Finishing and Custom Packaging

Your Finished Product Packaged Ready to Sell.

We can finish your part in our shop with hot stamping, assembly, jigs for specialized drilling and milling or ultra-sonic welding. We can also dress up your parts by having them metalized, painted, or decorated with screen or pad printing.

After we've manufactured and assembled your product, we'll place it in your packaging, making sure the package is prepared with labels properly affixed, ready to sell.

Warehousing/Shipping

We Warehouse and Blanket or Drop Ship Your Inventory.

We have over 37,000 square feet of clean warehouse space. This makes it convenient for our customers to have us manufacture their parts in bulk and then store them here. We can then blanket ship in predetermined quantities.

We are also equipped to permanently warehouse and then drop ship your product to customers. We'll take the orders, package the product, and ship directly, freeing you up to concentrate on sales.
